REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The outstanding rejection under section 103 is withdrawn. Namely, JP 636 and WO 712 represent the closest prior art. However, JP 636 fails to teach the required catalysts. Notwithstanding the fact that comparative examples 1, 2 and 3 refer to the use of bis(triphenylphosphine)palladium(II)dichloride as a catalyst, these examples demonstrate clearly that this catalyst, which is free from ferrocene ligands, does not work, that is, the targeted compound was not obtained and the starting material was recovered almost completely. This is a clear teaching away from the use of ferrocene ligand-free catalysts as used in the present condensation reaction. Based on this disclosure in the JP reference, the artisan would not be motivated to carry out the condensation reaction in the presence of such catalysts. Moreover, the reference fails to provide any reason to use the required catalysts with alkali metal hydroxides.

Additionally, WO 712 fails to provide any reason to modify its disclosure to include alkali metal hydroxides.

An updated search failed to uncover a reference that would have provided a reason to conduct the claimed reaction in the presence of both a) the recited palladium catalysts, and b) alkali metal hydroxides.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl J. Puttlitz whose telephone number is (571) 272-0645. The examiner can normally be reached on Monday to Friday from 9 a.m. to 5 p.m.
